ENERGY & AGEING

Every cell in our body needs energy to live & function e.g. brain, skin & muscle cells.

We need new cells to replace old worn out cells.
Making new cells requires a lot of energy.

More energy = more new cells replacing old cells
= better health & slower ageing

DISEASE

Old worn out cells & mitochondria malfunction contribute to diseases;

e.g. Diabetes, Parkinson's, Alzheimer's, Long Covid, ME & Chronic Fatigue.

Healthy cells & healthy mitochondria support healthy ageing.

NAD FUELING OUR CELLS

Mitochondria are the powerplants in all cells, they use **NAD** to make energy.

Our cells make NAD, unfortunately we make 80-90% less as we get older.

Low NAD = Low energy production

Low Energy = Few new cells made

= Old worn out cells

YOUNGER & FRESHER NATURALLY...

Energise-X contains NAD, NMN
CoQ10, vitamins & minerals to
feed our mitochondria
