GASTRO-INTESTINAL DIRECT

FS00000-03

KNEAD

OPEN

INGEST DIRECTLY

OR DILUTE

APPLICATION

For the internal treatment of acute gastrointestinal complaints associated with stomach aches, nausea, vomiting, flatulence and diarrhoea: Children and adults should take 2 sachets, at 15 ml each, 3–5 times a day directly or diluted in water or tea between meals and if required immediately before bedtime.

When acute symptoms have eased, treatment can be continued for a few days by taking 1 sachet (15 ml) 3 times a day.

PLEASE NOTE

In consultation with your doctor please take your medication at least 2 hours before or after taking Hübner Original Silicea® Gastro-Intestinal DIRECT, as it may influence the effect of the medication.

The application on children should only be done after consulting a doctor.

In case of severe pains, high fever or if the treatment has not proved effective after 3 days, please consult a doctor.

PRODUCT INFORMATION

The active ingredient of Hübner Original Silicea® Gastro-Intestinal DIRECT is silica gel (silicic acid gel), a compound made up of the mineral silicon (Si) with oxygen and water.

Silica gel has an unusual high bonding capacity not only for pathogens and their toxins but also for gases. Thus it can also reduce annoying flatulence. This means that gases, pathogens and their toxins are bound by a purely physical process in the gastrointestinal tract and excreted naturally by the intestine. It soothes the symptoms and supports the regeneration of the upset gastrointestinal tract.

Also suitable for children.

COMPOSITION

Active ingredient: 100 ml of gel contain 100 ml silica gel (silicic acid gel) with 3.5 g of silicon dioxide.

SPECIAL ADVICE

Please read the instructions for use carefully. Knead sachet well before use. Keep out of reach and sight of children.

STORAGE

Do not store above 25 °C.

CONTENT

6 sachet = 90 ml
