THE PROFESSIONAL RANGE

Anthocyanidins (and proanthocyanidins) are the natural pigments that are responsible for the rich blue and red colours of fruits and berries. Anthocyanidins have been the focus of considerable scientific research, which confirms that these compounds are important constituents of a healthy diet. Colladeen® Derma Plus provides a particularly rich source of these natural source plant extracts (from grape seed and bilberries), alongside green tea leaf and a full 6mg of pure free-form lutein. It also includes vitamin C, which plays a role in normal collagen formation, together with niacin and biotin - all of which support the maintenance of normal skin.
